

Corporate Register Data Packages

Overview

Corporate Register is the world's most comprehensive online database of non-financial reporting, with over 113,250 reports profiled from over 19,400 organisations.

Of these, over 102,000 reports are from over 17,600 companies (the remaining reports are from non-corporates eg universities, governments, trade associations etc).

We have over 46,000 reports from over 7,000 companies listed on global stock exchanges. We document ICB and GICs sectors, ISINs, SEDOLs and ticker symbols.

We feature several types of non-financial report including environmental, CSR, sustainability reports and also 'integrated reports'. We also include annual reports providing they have a minimum of six pages of substantive non-financial content. In some cases this means we feature more than one type of report for a given organisation per year.

Most of the reporting organisations are corporate, but we also profile non-corporates such as Governments and governmental departments, trade associations, universities and more. There is a drop-down listing of non-corporate organisations on our Advanced Search page.

We profile reports going back to 1990, and from any country, providing that a report is available in a latin script – meaning that we do not profile reports which are only available in languages such as Russian, Chinese, Korean, Japanese, Arabic etc.

We always profile reports in English where this language version is available. Over 75% of reports are English versions. We prefer to profile reports as PDFs, meaning that the vast majority of our profiled reports are archived in this format and are downloadable from our site.

Data can be provided in a spreadsheet

1. We can also provide reporting data in spreadsheet format. We can tailor these spreadsheets to a client's requirements, with the most usual format being the organisation's name and the report title, followed by year of publication and up to six additional parameters.
2. The list of additional parameters can be supplied on request and includes such parameters as whether a report was externally assured, the 'reporting partners' which developed the report, frameworks such as the <IR> Framework, the GRI Framework and the Global Compact and a number of related parameters.
3. We can 'map' our spreadsheets to lists of companies using unique identifiers such as ISIN and SEDOL codes. We have a wealth of data not displayed on our website, including stock exchange listings, several sector classifications, financial turnover (normalised by currency) and employee numbers.
4. Our fees are GBP 3.00 per spreadsheet record (ie a line in a spreadsheet) with a 50% discount for academics and non-profits. We charge our time for mapping a client's universe against our records so please contact us for an estimate of these fees.
5. For clients wishing a more tailored data set, or who need regular updates of reporting information, we have developed an API – please contact us to discuss.

For further information please contact Paul Scott, Managing Director: info@Corporateregister.com
